OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Javascript and its framework remain highly sought after worldwide.
- Front-end development is most popular sector in the industry.
 - Sub Point 1
 - Sub Point 2
 - Sub Point 3
- In the age of AI and big data, cloud platforms are popular and non-relational databases are increasingly popular, too.
- The majority are young male adults with bachelor degree.
- Newer languages such as Typescript, Go are increasingly popular than old languages such as PHP.

INTRODUCTION

- This is the report for trends of future technology in 2020.
- With the advent of AI and Big data, the programming languages, databases and platforms used are different compared to 10 years ago or even 1 year ago.
- As diversity being preferred nowadays, we will observe it whether or not there is diversity.
- We will observe the prediction of technology trends and software industry overall.

METHODOLOGY

- The dataset is from online survey of software professionals across the world conducted by Stack Overflow, a popular website for developers.
- The data used is 1/10th of the original dataset and it may not reflect the real world scenario.
- The data is normalized to have the same weight across the table
- Point4
 - Sub Point1
 - Sub Point2

RESULTS

PROGRAMMING LANGUAGE TRENDS

Current Year

10 Most Used Programming Languages in 2019

Programming Languages
● Bash/Shell/PowerShell ● HTML/CSS ● JavaScript ● Python ● SQL

Next Year

Top 10 Hottest Programming Languages in 2020

Programming Languages
● HTML/CSS ● JavaScript ● Python ● SQL ● TypeScript

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- Both Javascript and HTML/CSS remain unchanged at the top. This shows that front-end web programming language is still going strong.
- Python language is becoming popular.
- Typescript which is a new superset of Javascript also becomes a new language to learn for developers

Implications

- Front-end web development is likely to continue to grow next year.
- Python which is a universal versatile language and easy to learn, will increase its popularity with the advent of AI and other scientific utilization of python language.
- SQL, a relational database language is still a must to learn next year.

DATABASE TRENDS

Current Year

5 Most Used Databases in 2019

Next Year

Top 5 hottest Databases in 2020

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- MySQL by Oracle remain at the top but other relational databases are catching up.
- The top 4 are relational databases which indicates relational databases are still most popular databases.
- The fifth database is MongoDB which is a NoSQL database as NoSQL databases are becoming popular.

Implications

- Relational databases will still be popular but other types of databases are among the top databases to be used next year.
- Non-relational databases such as MongoDB and Redis are becoming widely-used as data is increasing in veracity, velocity and volume.

DASHBOARD TAB 1

10 Most Used Programming Languages in 2019

10 Most Used Databases in 2019

Most Used Platforms in 2019

10 Most Used WebFrames in 2019

DASHBOARD TAB 2

Top 10 Hottest Programming Languages in 2020

Top 10 hottest Databases in 2020

Hottest Platforms in 2020

Top 10 Hottest WebFrames in 2020

DASHBOARD TAB 3

Respondents by Gender

Respondents by Age

Respondents by Countries

Respondents by Gender and Education

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Findings

- The frameworks of Javascript are the most popular as it can be used as a both front and back end language.
- The majority of respondents are male which may be due to the frequency of the response but it can reflect a bit about gender inequality in the industry.
- The majority of the respondents are from United States and have age of 28 with a bachelor degree.

Implications

- The Javascript with its frameworks and front-end web development will continue to be popular worldwide.
- Although the industry doesn't need a degree to enter, bachelor and master degrees are still the majority.
- The majority are young adults in the industry which indicates that age can play a major role.

CONCLUSION

- Javascript and front-end development still reigns at the top of most popular languages.
- With AI and Big data, NoSQL becomes increasingly popular.
- The industry is still male-dominated with high turnover rate with increasing age.
